## I. Background

Greater Baltimore Medical Center is spearheading a comprehensive assessment of the health needs of individuals living in Baltimore County in Maryland. The aim of the assessment is to reinforce Greater Baltimore Medical Center's commitment to the health of residents and to align its health prevention efforts with the community's greatest needs.

The data contained in this report is a compilation of existing demographic and health data also known as "secondary data." The data was gathered and integrated into the report by Holleran, an independent research firm located in Wrightsville, Pennsylvania. The specific data sources are listed throughout the report. It should be noted that in some cases, local-level data may be limited or dated. This is an inherent limitation with secondary data. The most recent data is used whenever possible. When available, state and national comparisons were also provided as benchmarks for the regional statistics. National comparisons include United States data and Healthy People 2020 (HP 2020) goals when available.

It is also important to note that social determinants such as income and education can significantly impact health status, health behaviors, and health outcomes. Research has shown that lower educational attainment, poverty, and race/ethnicity are risk factors for certain health conditions. For this reason, local demographic information is included in the report for reference.

A conclusions section is included at the end of the report to highlight strengths, opportunities, and differences for Baltimore County. State and national comparative data is generally what determines if an indicator is a strength or opportunity within the community. However, it is still important for readers to interpret the county data and make appropriate conclusions independent of the state and national comparisons.

The secondary data profile is one component to the research. Greater Baltimore Medical Center will use the data from the secondary data profile in conjunction with other research components to understand health needs and prioritize community health endeavors.

## **II. Reading the Results**

Demographic and health indicator statistics have been collated to portray the current health status of Baltimore County. For all of the statistics provided, the most recently published data at the county level are utilized. For example, if 2012 data are available at the national and state levels, but only 2010 data are available at the county level, 2010 data are utilized at all levels unless otherwise indicated.

### **Definitions**

**Age-Adjusted Rate** - Assumes equal age distributions between populations to account for the effect of age on disease and death rates.

**Crude Rate** - Generally defined as the total number of cases or deaths divided by the total population at risk. Crude rate is generally presented as per populations of 1,000, 10,000 or 100,000. It is based on raw data and does not account for characteristics such as age, race, and gender.

**Family** - Defined as more than one person living together, either as relations or as a married couple.

**Frequency** - Often denoted by the symbol “n,” frequency is the number of occurrences of an event.

**Household** - Defined as one or more people sharing a residence. Examples include college students sharing an apartment or a single male living alone.

**Incidence Rate** - Indicates the number of new disease cases in a specified amount of time. Time is determined by the number of years candidates for the disease are observed before they are diagnosed.

**Infant Mortality Rate** - Defined as the number of infant deaths per 1,000 live births per year. Infant is defined as being less than one year of age.

**Low Birth Weight** – Indicates a birth weight less than 5 pounds, 3 ounces (2,500 grams).

**Neonatal Mortality Rate** - Defined as the number of infant deaths in the first 27 days after birth per 1,000 live births per year.

**Post-Neonatal Mortality Rate** - Defined as the number of infant deaths occurring from 28 days to 12 months per 1,000 live births per year.

**Poverty Guidelines** - A version of the federal poverty measure issued each year in the *Federal Register* by the Department of Health & Human Services. The guidelines are a simplification of the poverty thresholds used for administrative purposes (i.e. determining eligibility for certain federal programs).

**Very Low Birth Weight** - Indicates a birth weight less than 3 pounds, 5 ounces (1,500 grams).

### III. Demographic Statistics

#### A. Population Statistics

Table A1. Overall Population (2010; 2012 - 2016)

	U.S.	Maryland	Baltimore County
Population (2012 - 2016)	318,558,162	5,959,902	825,666
Population Change from 2010	3.2%	3.2%	2.6%
Male population	49.2%	48.4%	47.4%
Female population	50.8%	51.6%	52.6%

## VI. Conclusions

The following conclusions are drawn from comparisons of Baltimore County to Maryland and to the U.S. secondary data. They are categorized as either Areas of Strength, Areas of Opportunity, or Areas of Difference. Areas of Strength highlight factors in which the county has a more favorable outcome than Maryland and the U.S. In contrast, Areas of Opportunity highlight factors in which Baltimore County can improve upon in comparison to the state and the nation. Areas in which the county differ notably from the state and national data, but cannot be considered to be strengths or opportunities, are considered Areas of Difference. For example, if Baltimore County has a notably larger male population versus female population, this is neither a strength nor an opportunity, but is an Area of Difference.

### AREAS OF STRENGTH

#### ❖ **Household Statistics**

- Baltimore County has a lower percentage of vacant homes (7.2%) when compared to Maryland (10.1%) and the nation (12.2%).
- A slightly lower proportion of residents in Baltimore County spend more than 30% of their income on a mortgage (29.1%) when compared to residents across Maryland (31.0%) and the nation (30.8%). The same is true for residents spending more than 30% of their income on rent. The percentage in Baltimore County (49.0%) is lower than the state (50.5%) and the nation (51.1%).

#### ❖ **Income Statistics**

- Baltimore County has lower poverty rates for all families, female-headed households and individuals when compared to the state and nation.
- There are a lower percentage of households in Baltimore County that are receiving food stamps (10.3%) when compared to Maryland (11.1%) and the nation (13.0%).

#### ❖ **Employment Statistics**

- Baltimore County's unemployment rate is 4.3%. This percentage is similar to the state (4.1%) and the nation (4.4%).

#### ❖ **Education Statistics**

- Residents aged 25 years and over in Baltimore County are just as likely to have graduated from high school (91.0%) when compared to the state (89.6%). However, they are slightly less likely to have attained a bachelor's degree (37.2%) compared to residents across the state (38.4%). Both percentages are higher when compared to the nation.

#### ❖ **Health Care Access Statistics**

- Residents in Baltimore County are more likely to have health insurance (92.6%) when compared to residents in Maryland (91.9%), and the nation (88.3%).

- There is a higher percentage of residents in Baltimore County who have received a routine check-up within the past year (78.1%) than residents across the state (76.2%) and the nation (70.2%).

#### ❖ **Maternal & Child Health Statistics**

- The teenage birth rate per 1,000 live births for 15-19 year olds is lower in Baltimore County (12.7) when compared to Maryland (15.9) and the nation (20.3).
- The infant (5.9) and post-neonatal (1.5) mortality rates are slightly lower in Baltimore County when compared to Maryland and the nation. They are also meeting the HP 2020 goal of 6.0 and 2.0 respectively.

#### ❖ **Behavioral Health Statistics**

- The percentages of binge drinkers (12.9%) and chronic drinkers (5.0%) are both lower than the national percentages of 16.3% and 5.9% respectively. The percentage of binge drinkers is lower than the state (14.2%) and the percentage of chronic drinkers is similar (4.9%).
- Baltimore County has a lower percentage of current smokers (12.8%) than the state (15.1%) and the nation (17.1%).

#### ❖ **Cancer Statistics**

- The age-adjusted cancer incidence rate for cervical cancer is similar to the state but better than the national rate.
- The age-adjusted cancer mortality rate per 100,000 is similar in Baltimore County (162.7) and the state (162.3), but both rates in the county and the state are better than the rate in the nation (163.5). However, all rates still fall short of the HP 2020 goal of 161.4.
- The age-adjusted cancer mortality rate for colon and rectal and cervical cancer in Baltimore County is similar to the rate in the state and the nation and meet the HP 2020 goals. The rate for lung and bronchus cancer is worse than the state but is similar to the nation and meets the HP 2020 goal. The rate for prostate cancer is better than the state, nation, and meets the HP 2020 goal.

#### ❖ **County Health Rankings**

- Baltimore County ranked in the top half of all 24 Maryland Counties in regard to health factors (11), health behaviors (8), and clinical care (8). There are a few measures that Baltimore County performs better than both the state and the National Benchmark. This includes:
  - Baltimore County residents have better access to exercise opportunities (94%) than residents across Maryland (93%) and compared to the National Benchmark (91%).
  - The primary care physician density in Baltimore County (990:1) is better than the state (1,140:1) and the National Benchmark (1,030:1).

## AREAS OF OPPORTUNITY

### ❖ Household Statistics

- There are a higher percentage of grandparents responsible for their grandchildren in Baltimore County (38.4%) than in the state (32.3%) and the nation (36.5%).
- Baltimore County has a larger proportion of single-female householders (14.4%) when compared to the nation (12.9%). The percentage is similar to the state (14.3%).
- There is a greater proportion of householders living alone who are 65 years or older in Baltimore County (11.8%) than in the state (9.8%) and the nation (10.4%).

### ❖ Health Care Access Statistics

- In Baltimore County, there are a higher percentage of residents who could not afford to see a doctor in the past year (12.3%) when compared to residents across Maryland (10.8%). This percentage is similar to the nation (12.1%).
- Baltimore County has two service areas that have been designated as Medically Underserved Areas, including Middle River and Landsdown/Highlands.

### ❖ Mortality Statistics

- The crude death rate per 100,000 in Baltimore County (1,015.1) is higher when compared to the state's rate of 812.5 and the nation's rate of 849.3.
- The top three causes of death in Baltimore County and Maryland are diseases of the heart, cancer and stroke. The top two leading causes of death are the same in the nation; however, accidents is the third leading cause of death in the nation.
- The crude death rate per 100,000 due to heart disease, cancer, stroke, diabetes, and influenza and pneumonia are all worse than the rates in the state and the nation. The death rate for accidents, chronic lower respiratory disease, Alzheimer's disease, nephritis, nephrotic syndrome and nephrosis, and suicide are all better than the rate in the nation but still worse than the state rate.

### ❖ Maternal & Child Health Statistics

- The percentages of low birth weight (8.8%) and very low birth weight (1.8%) births are slightly higher in Baltimore County when compared to the percentages in the state and nation. The percentages for both also still fall short of the HP 2020 goals of 7.8% and 1.4% for low birth weight and very low birth weight respectively.
- The neonatal mortality rate in Baltimore County (4.4) is higher than the rate in the nation (3.9) but is better than the state rate (4.7). The rate still falls short of the HP 2020 goal of 4.1.

### ❖ Communicable Diseases Statistics

- Baltimore County has a higher incidence rate per 100,000 for gonorrhea (186.1) when compared to the state (181.4) and the nation (145.8).
- While Baltimore County has a lower incidence rate per 100,000 for chlamydia (538.2) than the state (552.1), both rates are higher than the rate in the nation of 497.3.

- The incidence rate per 100,000 for HIV (19.0) is lower in Baltimore County compared to the state (26.5); however, both the county and state rates are higher when compared to the nation (14.4). The incidence rate for tuberculosis is the same in Baltimore County and the state but both rates are higher than the nation.

#### ❖ Behavioral Health Statistics

- The crude death rate due to suicide per 100,000 in Baltimore County (10.8) is lower when compared to nation (13.9) but is still worse than the suicide rate in Maryland (9.7).
- Both the percentage of individuals diagnosed with an anxiety disorder (16.7%) and a depressive disorder (19.8%) are higher when compared to the state (13.5% and 16.3% respectively). The percentage diagnosed with a depressive disorder is also higher than the nation (19.0%).

#### ❖ Cancer Statistics

- The overall age-adjusted cancer incidence rate per 100,000 is higher in Baltimore County (476.8) when compared to Maryland (446.2) and the nation (441.2).
- The age-adjusted cancer incidence rate for breast, bladder, lung and bronchus, pancreas, melanoma, prostate, and uterine cancer are all higher in Baltimore County when compared to the state and the nation. The rate for colon and rectal cancer in Baltimore County is better compared to the nation but is still worse than the rate in the state.
- The age-adjusted cancer mortality rates for breast, bladder, and pancreatic cancer are all higher in Baltimore County compared to both the state and nation. The age-adjusted rate for uterine cancer is similar to the state but both are worse than the rate in the nation. The rate for melanoma is similar to the state and the nation; however, it still falls short of the HP 2020 goal.

#### ❖ Chronic Disease Statistics

- There were a higher percentage of residents in Baltimore County who reported having angina or coronary heart disease and diabetes when compared to the percentages in the state and the nation.
- The percentage of adults at a healthy weight is lower in Baltimore County (31.0%) compared to both Maryland (35.0%) and the nation (32.7%).

#### ❖ Crime Statistics

- The overall total crime rate per 100,000 is higher in Baltimore County (3,361.2) when compared to Maryland (2,801.3) and the nation (2,837.0).
- The Baltimore County violent crime and property crime rates are both higher when compared to the rates in Maryland and the nation.

#### ❖ County Health Rankings

- Baltimore County ranked in the middle or near the bottom half of all 24 counties in Maryland in regard to health outcomes (13), length of life (13), quality of life (12), social and economic factors (12), and physical environment (23). There are a few measures that could be

improved upon in comparison to Maryland and the National Benchmark in order to increase Baltimore County's rank. Some of the more notable measures needing improvement include:

- Years of potential life lost before age 75 per age-adjusted 100,000 is higher in Baltimore County (6,700) when compared to the state (6,500) and the National Benchmark of 5,300.
- Baltimore County residents reported a slightly higher rate of poor mental health days in the past month (3.7) when compared to the National Benchmark (3.1).
- Baltimore County has an average daily density of fine particulate matter of 11.1. This is higher than the average in Maryland of 9.5 and the National Benchmark of 6.7.

## AREAS OF DIFFERENCE

### ❖ Population Statistics

- Baltimore County experienced a slightly slower population growth between 2010 and 2016 (2.6%) when compared to Maryland and the nation (3.2%).
- Baltimore County has a slightly higher median age (39.1) when compared to the state (38.3) and the nation (37.7).
- Nearly two-thirds of the population in Baltimore County is White. This proportion is higher than the state (59.7%) but lower than the nation (76.0%). Twenty-nine percent of the population is Black/African American, which is slightly lower than the state (31.4%) but higher than the nation (13.8%).
- The percentage of individuals who speak a language other than English at home is lower in Baltimore County (13.9%) when compared to Maryland (17.6%) and the nation (21.1%). Residents who speak a language other than English at home in Baltimore County are most likely to speak an Other Indo-European language (4.8%) or Spanish (4.0%).

### ❖ Household Statistics

- The median home value in Baltimore County (\$246,900) is lower than that of Maryland (\$290,400) but higher than the nation (\$184,700).
- The median amount of dollars spent on housing rental is slightly lower in Baltimore County (\$1,193) when compared to the state (\$1,264) but is higher compared to the nation (\$949).

### ❖ Income Statistics

- The median income for households and families is slightly higher in Baltimore County when compared to the nation but is lower when compared to the state.
